

Long Island Nitrogen Action Plan (LINAP) - Special Announcement

Long Island Commission for Aquifer Protection (LICAP) Safeguarding Long Island's Aquifer System for Over a Decade!

Established in 2013 by unanimous votes in the Nassau and Suffolk Legislatures, [LICAP](#) is a bi-county organization dedicated to advocating for a coordinated, regional approach to the management of Long Island's groundwater resources. Their primary mission is to safeguard the essential aquifer system that provides 100% of Long Island's drinking water.

Both LINAP and LICAP recognize that protecting the quantity and quality of our groundwater is essential for maintaining the health and sustainability of the region's water resources and ecosystems on Long Island.

Nitrogen pollution poses a substantial threat to the integrity of our groundwater. Sources such as fertilizers, septic systems, and stormwater runoff contribute to nitrogen pollution in our groundwater. A comprehensive approach is necessary to address this issue. Through targeted outreach and educational initiatives, LINAP and LICAP are collaborating to engage the public and raise awareness and understanding about the importance of protecting Long Island's groundwater and sole source aquifer. Their joint efforts not only aim to mitigate the risks associated with nitrogen and other pollutants but to also foster lasting sustainable water practices.

LINAP invites you to visit LICAP's [Our Water Our Lives](#) website. There, you'll find essential information and resources on how you can contribute to the protection of our aquifer system.

Take Action! [Take the Our Water Our Lives Pledge!](#)
